

Basis Path Testing

Basis Path List (Independent Paths)

Path No.	Path Description
Path 1	Cart empty = Block checkout (no further action).
Path 2	Cart not empty - Check discount code: - Valid code -> Apply discount -> Proceed checkout. - Invalid code -> No discount -> Proceed checkout.

Basis Path Calculation

From the basis path testing for the checkout discount logic in *our* project, we established the cyclomatic complexity of the control flow.

The algorithm for achieving this is shown below.

Where 'E' equals Edges and 'N' equals Nodes:

$$\begin{aligned} V(G) &= E - N + 2 \\ &= 7 - 7 + 2 \\ &= 2 \end{aligned}$$

Basis Path List

Path 1: 1 - 2 - 3

Path 2: 1 - 2 - 4 - 5 - 6 - 7
