

User Interface Testing

UI Principle 1: Guidance

Guidance is being able to help users know what the next actions to take next are on a website. Guidance is important for a positive user experience and it ensures users can easily locate what they need and complete the required tasks. Guidance doesn't just make the website look good but it helps the website achieve the intended purpose.

On our "Sign In" page, we use guidance with the clear and visible link: "Don't have an account? Register here", this easily helps users navigate to the registration page if they are new and do not yet have an account.

The ultimate goal of guidance in a website is to ensure a simple, quick and easy way for users to navigate without getting stuck. Our "Register here" prompt ensures that users are given straightforward instructions to continue their experience without confusion.

UI Principle 2: Feedback

Feedback on a website is how the system responds visibly after a user completes an action, basically confirming whether the action performed was successful or unsuccessful. On our website, when a user attempts to sign in, the details provided are checked using PHP. For example, if a user provides the wrong email or password, a custom error message will be displayed. Feedback ensures users are informed immediately that their action was successful or not, this creates a smoother user experience.

Invalid email or password.

Don't have an account? [Register here](#)

[← Return to Home](#)

UI Principle 3: Recoverability

Recoverability allows the user to easily correct a mistake or exit unwanted states without restarting their session.

After login, a “Sign Out” button allows the user to safely log out and reset their session without any difficulty.

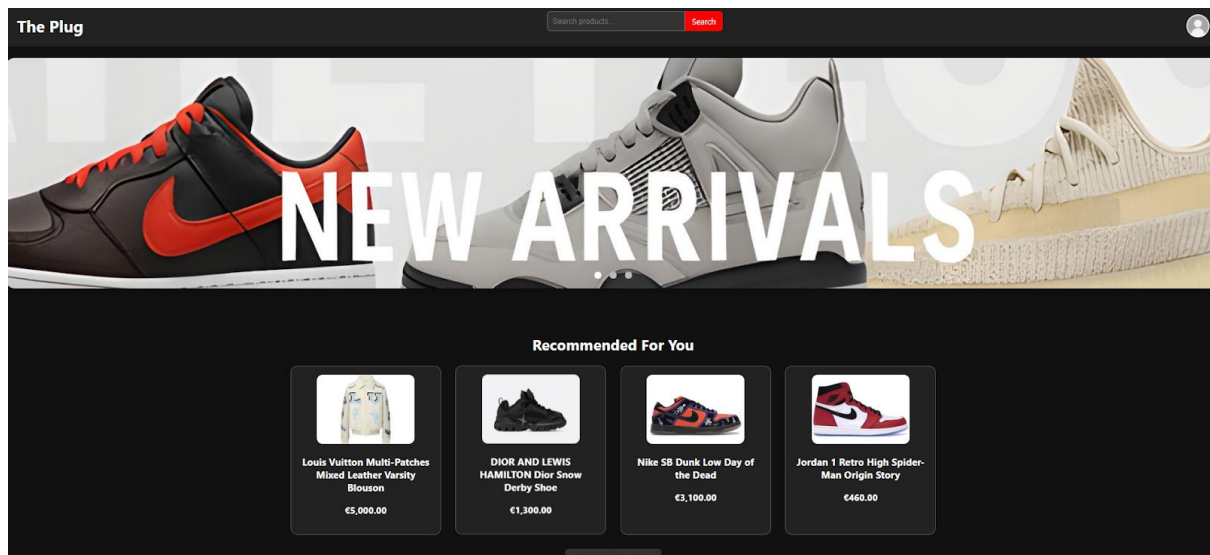

A screenshot of a 'Sign In' form. The form has a dark grey background. It contains two input fields: 'Email' and 'Password'. Below the input fields is a blue 'Sign In' button. Below the button is a red error message: 'Invalid email or password.'. Below the error message is a link: 'Don't have an account? [Register here](#)'. At the bottom is a link: '← [Return to Home](#)'. The 'Return to Home' link is blue and includes a left-pointing arrow.

The “Return to Home” link allows users to easily return to the home page if they do not want to log in. The “Return to Home” is also very useful for navigation as it allows the user to access the home page no matter what page they are on in the website.

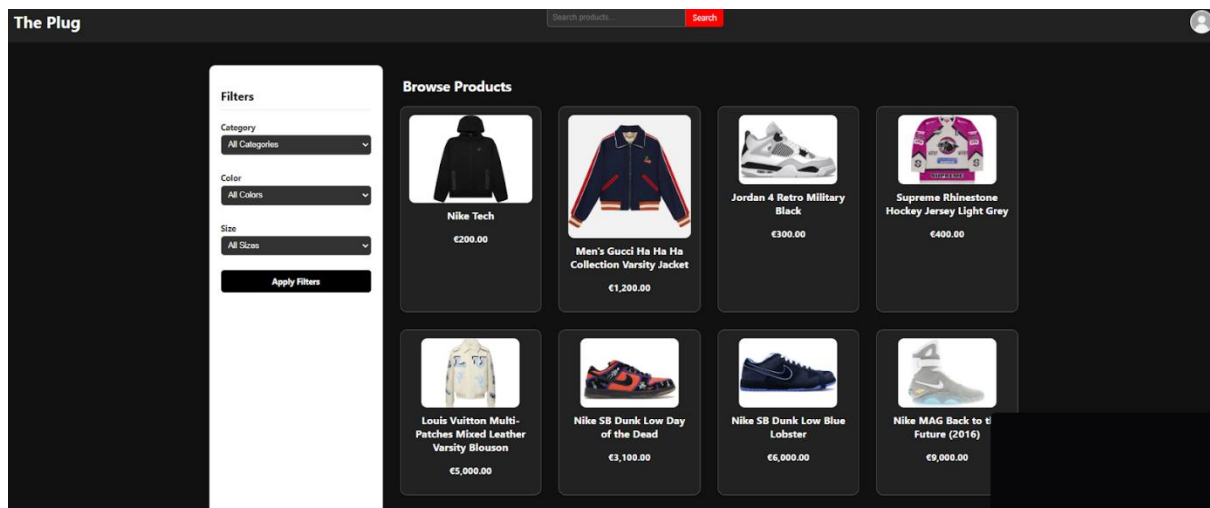

UI Principle 4: Consistency

Consistency is being able to keep the interface appearing the same across the entire website. On our website we made sure key elements such as the logo, search bar, and profile buttons were kept in the same position across the Home Page, Products Page and the Sign In page. This improves users experience as it provides the user with predictable navigation options.

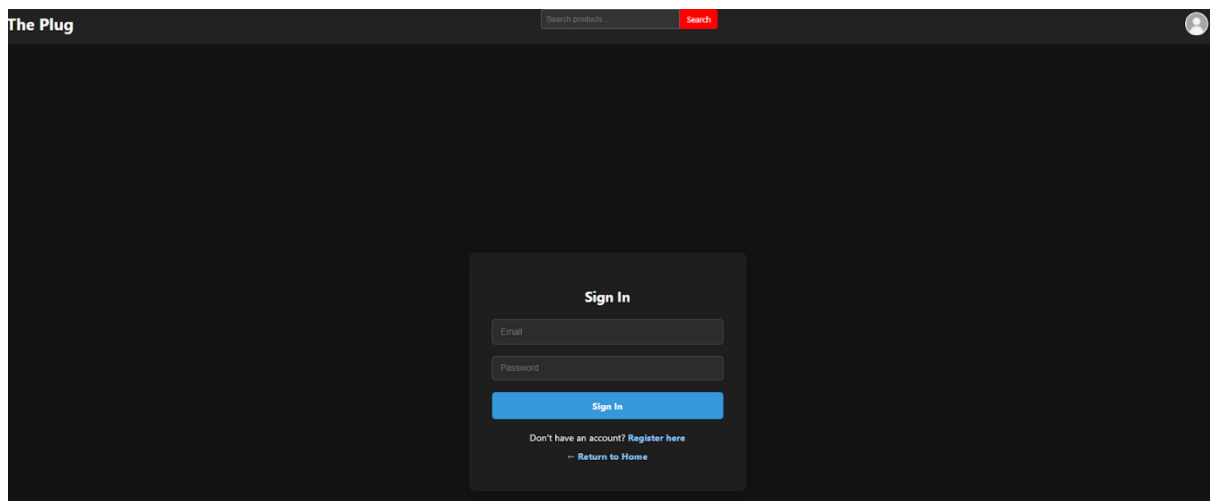

Home Page:

Products Page:

Sign In Page:

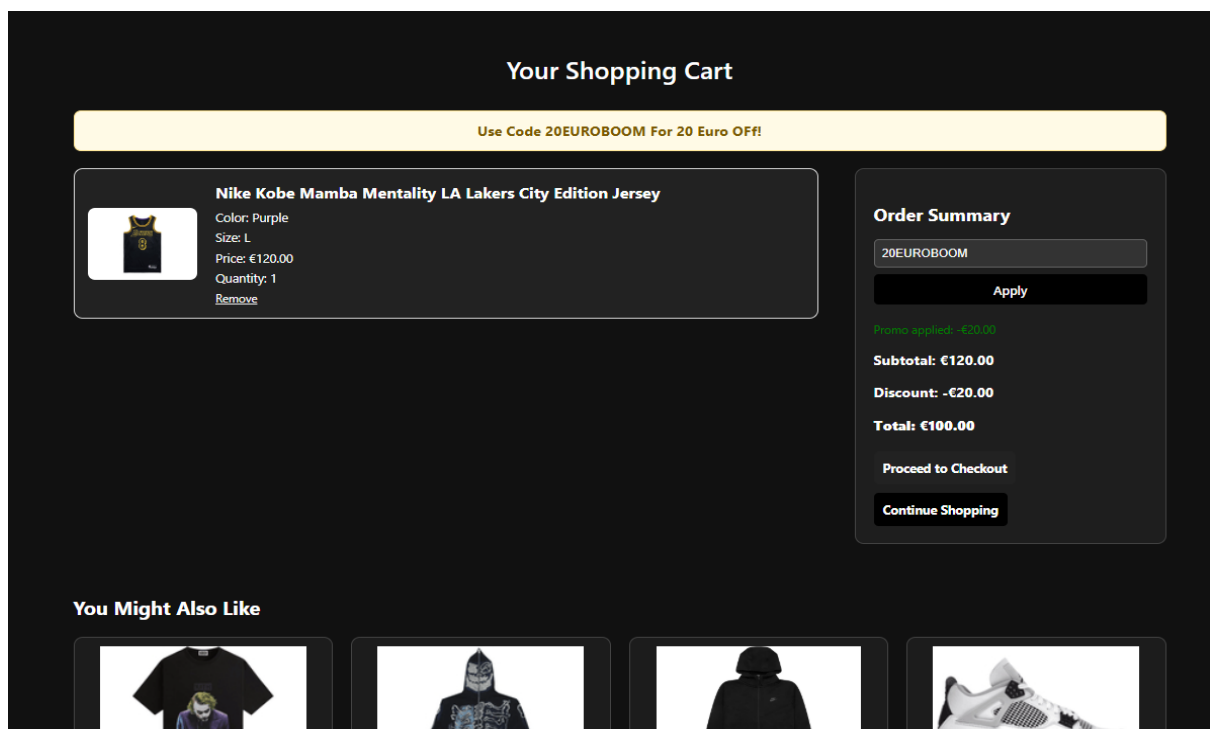

The image shows a dark-themed sign-in page for a website called 'The Plug'. At the top left is the site name 'The Plug'. At the top right is a search bar with the placeholder text 'Search products...' and a red 'Search' button. In the center of the page is a 'Sign In' form. The form has two input fields: 'Email' and 'Password'. Below these fields is a blue 'Sign In' button. Under the button, there is a link that says 'Don't have an account? Register here' and a link below it that says 'Return to Home'.

By keeping these navigation options in a constant position, regardless of where a user is on the site, these key functions always remain in the same position, making site interaction easy and precise for each and every user.

UI Principle 5: Minimal User Clicks

Minimal User Clicks aims to reduce the number of interactions needed for users to complete a given task on the website. On our website, after a product is added to the cart, users are immediately presented with a “Proceed to Checkout” button. This allows the user to quickly and easily move from browsing items to purchasing items with as few clicks as possible.

The image shows a 'Your Shopping Cart' page. At the top, there is a yellow banner with the text 'Use Code 20EUROBOOM For 20 Euro Off!'. Below the banner, the cart is divided into two main sections. On the left, there is a product listing for a 'Nike Kobe Mamba Mentality LA Lakers City Edition Jersey'. The listing includes a small image of the jersey, the product name, color (Purple), size (L), price (€120.00), quantity (1), and a 'Remove' link. On the right, there is an 'Order Summary' section. It features a text input field containing the code '20EUROBOOM' and an 'Apply' button. Below this, it shows 'Promo applied: -€20.00', 'Subtotal: €120.00', 'Discount: -€20.00', and 'Total: €100.00'. At the bottom of the summary section are two buttons: 'Proceed to Checkout' and 'Continue Shopping'. Below the cart section, there is a 'You Might Also Like' section with four product thumbnails: a black t-shirt, a black hoodie, a black jacket, and a white sneaker.
